DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3-21, 23-31, 33-51 and 53-60 are allowed.
2. The following is an examiner's statement of reasons for allowance: Neither Hubbard et al., Rector et al. nor Allgood teach an electric meter or a method for metering energy consumption with an electric meter that includes generating quantities for a plurality of phase voltages, monitoring voltage changes on at least one of the phase voltages, performing a predetermined task in response to a voltage change, changing a metering form type of the meter in accordance with a remaining set of phase voltages when at least one of the phase voltages is lost and generating metering quantities from the remaining set of phase voltages, as shown in claims 1 and 31, or a method that includes generating metering quantities for a voltage source with multiple voltages, receiving a request for a communication session, producing a static copy of revenue-related data, providing the data to the external device and changing a metering form type of the meter in response to a change in at least one of the multiple voltages, as shown in claims 19 and 49, or a method that includes generating metering quantities for a first voltage source that generates multiple voltages, receiving input data from other meters associated with a load, processing the input data to produce a value and changing metering form type of the meter in response to a change in one of the multiple voltages, as shown in claims 24 and 54.

Pyle et al. do not teach a method for metering energy consumption that includes controlling the meter using a first program in a first portion of the memory to generate

metering quantities, writing a second program into a second portion of the memory, switching control of the meter to the second program, interrupting the first program to store metering data in the memory upon initiating of the writing of the second program into the second portion of the memory and processing the stored metering data using the second program after control of the meter is switched to the second program, as shown in claims 21 and 51. Atherton et al. do not teach a method for metering energy consumption that includes operating the meter in a first mode, periodically checking at temporal boundaries for pending changes to the mode of operation, effecting the change after the check and checking whether a pending action was scheduled for a period boundary crossed by a power failure affecting the energy consumption, as shown in claims 27 and 57.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Briese et al. (US Patent Application Publication 2003/0178985) teach an electronic revenue meter with automatic service sensing.

Lavoie et al. (WO 98/52057) teach an electric meter configurable for different metering form types.
